Aims and Scope

Nuclear Instruments and Methods in Physics Research – Section A publishes papers on design, manufacturing and performance of scientific instruments with an emphasis on large scale facilities. This includes the development of particle accelerators, ion sources, beam transport systems and target arrangements as well as the use of secondary phenomena such as synchrotron radiation and free electron lasers. It also includes all types of instrumentation for the detection and spectrometry of radiations from high energy processes and nuclear decay, as well as instrumentation for experiments at nuclear reactors. Specialized electronics for nuclear and other types of spectrometry as well as computerization of measurements and control systems in this area also find their place. Theoretical as well as experimental papers are accepted.

NUCLEAR INSTRUMENTS AND METHODS IN PHYSICS RESEARCH – SECTION A

Instructions to Authors

Submission of papers

Contributions should be sent to one of the Editors (see inside front cover). The manuscript and copies of figures should be submitted in triplicate, together with one set of good quality figure material for production of the printed figures. Short contributions of less than 1500 words and not subdivided into sections may be published as Letter to the Editor, Comment, or Reply in a shorter time than regular articles as the proofs will normally be corrected by the publisher.

Manuscript preparation

Manuscripts should be written in good English. They should be typed throughout with double line spacing and wide margins on numbered, single column pages.

The *title page(s)* should contain the article title, author(s) names and affiliations, the text of related footnotes and the text of the abstract. The author to whom the proofs should be sent must be indicated with her/his full postal address, telephone number, fax number and/or e-mail address. One to four classification codes (PACS and/or MSC) and up to six keywords of the author's choice should be given below the abstract. The PASC'96 and MSC'91 lists are available on the Elsevier web server: http://www.elsevier.nl

Tables should be typed on separate sheets at the end of the manuscript. In addition to its serial number, each table should have a sufficiently detailed caption to explain the data displayed in it.

Figures should be numbered and their captions listed together at the end of the manuscript.

References in the text to other publications should be numbered consecutively within square brackets and listed together at the end of the text.

Formulae in the manuscript should be clearly written or typed with particular consideration given to characters that may be misinterpreted. Unusual symbols should be explained in pencil in the margin.

Illustrations

The publisher requires a set of good quality line figures and original photographs to produce the printed figures.

Line drawings should be original laser printer or plotter output or drawn in black India ink, with careful lettering, large enough to remain legible after reduction for printing.

Photographs should be originals, with somewhat more contrast than is required in the printed version. They should be unmounted. The top side of a photograph should be marked if necessary.

Colour figures can be printed in colour when they are judged by the Editor to be essential to the presentation. The publisher and the author will each bear part of the extra costs involved. Further information concerning colour illustrations and the cost to the author is available from the publisher.

After acceptance

Page proofs are sent out to authors in order to check that no undetected errors have arisen in the typesetting or file conversion process. At the proof stage only printer's errors may be corrected. No changes in, or additions to, the edited manuscript will be accepted.

Copyright transfer. In the course of the production process the authors will be asked to transfer the copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Electronic manuscripts

LaTeX files can be handled by the Publisher. A disk containing the LaTeX version of the manuscript can be submitted together with the hard copies of the text and figures. It is the responsibility of the authors to ensure that the version on disk exactly matches the hard copies. No deviations from the version accepted for publication are permissible without the prior and explicit approval by the Editor. The Publisher reserves the right to decide whether to process a manuscript from the authors' file or not.

The Elsevier LaTeX Package (including detailed instructions) can be obtained using anonymous ftp from the Comprehensive TeX Archive Network (CTAN) from the directory:
